NISARG FOUNDATION

Letter of Recommendation

August 31, 2026

To Whom It May Concern,

It is with great admiration that I write in support of **Suveer Saigal**, a Grade 12 student at The Shri Ram School, Moulsari, whose entrepreneurial vision and commitment to sustainable development with the Nisarg Foundation has grown into one of the most promising youth-led livelihood initiatives we have supported.

Suveer began collaborating with us in July 2025 while we were exploring sustainable livelihood pathways for women in Faridabad. He spent considerable time in understanding the realities of the women we worked with, their existing skills, access to resources, and the challenges they faced in generating reliable income. Rather than approaching the challenge as a charitable exercise, he saw the opportunity to build a functioning micro-enterprise around an existing waste stream: discarded textiles and garments. From that idea emerged Project 'Tanabana', a women-led circular-economy venture built around textile upcycling and livelihood generation.

Working alongside a cohort of nearly **20 women,** he transformed what began as a small skill-development initiative into a structured micro-enterprise centred around sustainable textile upcycling. One of his earliest contributions was helping us secure approximately **₹2 lakh in CSR support**, which became critical seed capital for the project. The funds enabled the procurement of sewing machines, engagement of skilled trainers, and establishment of a structured production setup. Suveer simultaneously helped mobilise nearly **1,000 donated garments**, creating a steady raw-material base through which women could train in stitching, patchwork, product finishing, and textile reuse.

Suveer's greatest strength was his ability to think beyond product creation and build complete business systems. He helped develop the Tanabana brand from inception, designing its identity, packaging, product positioning, and digital presence while creating a clear market strategy that reflected both sustainability and craftsmanship. He also played a central role in formalising the participating women from Mahila Maharajpur, Faridabad, into an organised self-help group, helping move the initiative from informal training into a collective enterprise model.

As **Project Tanabana** expanded, Suveer naturally and subsequently took over the role of mentor and capacity builder. He designed and conducted more than 10 workshops covering financial literacy, digital literacy, entrepreneurship, marketing, government welfare schemes, manufacturing processes, and the practical use of digital tools for small businesses. He focused on questions that directly affect a small enterprise: how to price a product, maintain simple records, speak to customers, accept digital payments, and use online platforms to build visibility.

Equally impressive was his understanding of market access. Appreciating that sustainable livelihoods require dependable sales channels rather than one-time exhibitions, Suveer worked to establish long-term commercial pathways for the women. He helped build Tanabana's digital presence through social media while simultaneously initiating onboarding processes with e-commerce platforms such as Amazon and Meesho, allowing the products to reach customers beyond the local community. His efforts reflected an uncommon appreciation for supply chains, branding, digital commerce, and customer acquisition—concepts that many undergraduate business students only begin to encounter.

One year later, the enterprise has produced over 700 upcycled products, generated approximately ₹3.5 lakh in revenue, and increased participating women's monthly incomes by nearly 45%. While these numbers are encouraging, the more meaningful outcome is that women who initially joined as trainees today confidently identify themselves as entrepreneurs managing a collective enterprise.

What impressed me most throughout this journey was Suveer's instinct to build something that could eventually function without him. He listened closely to the women, worked alongside our team rather than above it, and consistently focused on strengthening their ability to make decisions independently. His contribution was not simply to launch a project but to help build the systems, confidence, and market structure required for that project to sustain itself.

For all these reasons and more, I recommend Suveer Saigal with my highest confidence and without reservation. Project Tanabana stands today as a functioning women-led enterprise, and his role in helping build it from the ground up has been both meaningful and deeply appreciated by our entire team.

Sincerely,

Nidhi Chaturvedi

Director
